Water Conservation Guidelines

Voluntary Public Awareness Campaign

Water Conservation at Home

CONSERVING WATER IN BATHROOMS

1. Close tap when lathering, brushing teeth, water hands etc and use glass to rinse mouth
2. Have shorter showers and collect cold water in a bucket while waiting for shower water to turn warm
3. Put brick or bottle filled with water in the flush tank (displacing water in this manner leaves less water in the tank or flush)

CONSERVING WATER IN GARDEN/YARD

1. Use hand held watering can or spray and do not use hose pipe. Water plants at roots and do not over water plants
2. Clean car with a wet cloth using only a little water in a bucket or wipe car with wet cloth
3. Harvest water from the atmosphere through the cooling action of air conditioners. Harvest this water by putting one end of a plastic pipe in the air conditioner's discharge vent and the other in a jerry can or bucket and use this water for household purposes or in the garden
4. Please install valve at entry point of your underground tank water supply line so that overflow of water from the tank can be stopped.

CONSERVING WATER IN KITCHEN & LAUNDRY

1. Wash utensils in two sinks rather than directly under the tap. Fill one for soaking and the other for rinsing
2. Do not keep tap running while washing
3. When using a washing machine put in a full load
4. Defrost meat by taking out from freezer well before use and do not defrost in running water under tap

MAINTENANCE & REPAIR

1. Do not keep tap running while washing, put signs to remind students to do the same
2. Replace single-flush toilets with dual-flush toilets
