## Water Conservation Guidelines

Voluntary Public Awareness Campaign

### Water Conservation at Mosques

#### MANAGING WATER CONSERVATION AT MOSQUE

1. **Ensure** regular maintenance and repair of all water infrastructures
2. **Institute** periodic water audits at Mosques
3. **Arrange** for reuse of water harvested from the atmosphere (through cooling action of air conditioners)
4. In Mosque **appoint** one or more person to take on water conservation responsibilities
5. **Make** these responsibilities part of department goals, individual goals, and job descriptions
6. **Institute** daily checks of all bathrooms, kitchens, work areas and outdoor spaces to ensure that all taps are closed tight and that there are no leakages before the office or school closes each day

#### CONSERVING WATER AT WUDHU SITE

1. Use automatic taps as they will close automatically during the wudhu rites
2. Water used for wudhu must be saved from the sewerage line
3. Store wudhu water in a small tank to be used later for watering plants
4. Avoid using pipe for washing masjid or watering plants. This can be done with a bucket or a can
